

My name is Yuri Ustinov, and I am a QA Engineer/Software Tester with over 5 years of experience in testing web and mobile applications, APIs, and working with high-load services. I am confident that my skills and experience will contribute to improving product quality.

At this stage of my career, I actively work with various types of testing, including functional, non-functional, integration, regression, and more. I have strong expertise in analyzing requirements, developing test documentation, optimizing testing processes, and implementing QA best practices.

Throughout my career, I have honed my skills as a QA Engineer/Software Tester in two significant ways that have prepared me to excel in this role:

- **Comprehensive Test Planning and Execution:** In my previous position, I developed and implemented detailed test plans that effectively identified system defects and areas for improvement. This experience has equipped me with the ability to design meticulous test cases and execute them efficiently, ensuring that all software functionalities meet stringent quality standards.
- **Collaboration with Cross-Functional Teams:** In my role, I have frequently collaborated with developers, product managers, and other stakeholders to align testing procedures with project objectives. This has refined my ability to communicate effectively and work as part of a cohesive team, ensuring that all parties are informed and aligned on quality issues and resolutions.

Aside from my professional experience, I possess key strengths that are critical to the success of a QA Engineer/Software Tester:

- **Problem-Solving:** I excel at identifying the root causes of defects and devising practical solutions. This skill is vital in a testing environment, where quick and effective problem resolution can significantly enhance product quality.
- **Critical Thinking:** I approach testing challenges with a logical and analytical mindset, allowing me to foresee potential issues and address them proactively. This ability ensures that software is not only functional but robust and reliable.
- **Communication:** My strong communication skills enable me to convey complex technical information clearly and concisely to both technical and non-technical stakeholders. This facilitates better understanding and cooperation among team members and contributes to smoother project progression.

I am excited about the opportunity to apply my skills, experience and am confident that my background makes me a strong candidate for the QA Engineer/Software Tester position. I look forward to the possibility of contributing to your company's success and would welcome the opportunity to discuss how my expertise aligns with your needs.

I am looking for a team where I can apply my knowledge and skills to ensure product quality. I am considering remote positions only. I would be happy to discuss the details. Please find my resume attached for review. I can start working within 1 week.
